- ✓ *Cholesterol goes down by 36%*
- ✓ *Triglyceride goes down by 39%*
- ✓ *Muscle build up in 6 weeks*

First Natural Oral Plant Insulin In The World

Facts that you should know:

****What is HbA1c?**

Glycated Haemoglobin (HbA1c) is a protein in red blood cells that carries oxygen and glycated by joining with glucose in the blood.

By measuring HbA1c, clinicians are able to get an overall picture of your average blood sugar levels over a period of months.

HbA1c is important for diabetes patient as the higher the HbA1c, the greater the risk of developing diabetes-related complications.

High Cholesterol – The risk

You are at risk of the below conditions if you do not control your cholesterol:

1. *Heart Diseases*
2. *Stroke*
3. *Aortic aneurysm*
4. *High blood pressure*
5. *Harden arteries*

High Triglycerides – The risk

Triglycerides is a type of lipid (fat) stores in your cell. You are at risk of the below conditions if you do not control your Triglyceride:

1. *Type II diabetes*
2. *Pancreatitis*
3. *Heart disease*
4. *Stroke*
5. *Fatty Liver*
6. *Leg numbness*
7. *Dementia*

Diabetes – The risk

Diabetes is a disease in which your blood glucose, or blood sugar levels are too high. Glucose comes from the foods you eat. Insulin is a hormone that helps the glucose to get into your cells to give them energy. With type 1 diabetes, your body does not make insulin. With type 2 diabetes, the more common type, your body does not make or use insulin well. You are at risk of the below complication if you are diabetes patient:

1. *Heart disease*
2. *Kidney damage (nephropathy)*
3. *Eye damage (retinopathy)*
4. *Nerve damage (neuropathy)*
5. *Stroke*
6. *Limb amputations*
