什么是托玛琳？ What is TOURMALINE?

托玛琳是一种独特的天然矿物，具有自发释放负离子和远红外线的特性，有“电气石”之称。只需微小的摩擦或体温激发，它就能持续产生高浓度负离子，中和空气中的有害物质，带来如森林、瀑布般的清新环境。在静止或活动时促进新陈代谢，调节中枢神经系统，对心脏节律，血液循环都有有益的改善作用、净化血液，清除毒素、恢复疲劳、活化细胞、减少疾病发生、改善过敏体质、延缓老化等等。

Tourmaline is a unique natural mineral often referred to as an “energy stone.” It has the remarkable ability to release negative ions and far-infrared rays — naturally activated by body heat or gentle movement. These negative ions help neutralize harmful particles in the air, creating a fresh, clean environment similar to what you'd experience near a waterfall or deep in a forest. Beyond air purification, tourmaline may also support your body's natural functions. It can help boost metabolism, improve blood circulation, support heart rhythm, and calm the nervous system. Many also find it beneficial for detoxification, reducing fatigue, energizing cells, easing allergies, and even slowing signs of aging.
